Team ID	
Project Name	Smart Lender
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Overview of the project's file and folder structure:

```

smartbridge-smartlender/
├── app.py
├── dataset.csv
├── gittoken
├── loan_approved_page.png
├── loan_prediction_model.pkl
├── loan_rejected_page.png
├── predict_page.png
├── README
├── README.md
├── requirements.txt
├── smart_lender.ipynb
├── smart_lender.pdf
├── static
│   └── style.css
└── templates
    └── index.html

```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://smartlender-smartbridge.onrender.com/
Login Credentials (Demo)	Not required — the prediction form is publicly accessible with no login/authentication.
Platform / Hosting Provider	Render
Repository Link	https://github.com/pavanikaranam-sys/smartbridge-smartlender
Demo Video Link	https://drive.google.com/file/d/1NR_y27c8ye1X171MpSfT1BCtr4zQsySC/view?usp=sharing

Step 4: Run Instructions

Step-by-step instructions for the evaluator to run the project locally:

Pre-requisites:

Python 3.8+, pip, and internet access to install dependencies listed in requirements.txt.

Step 1: Clone the repository: `git clone https://github.com/pavanikaranam-sys/smartbridge-smartlender.git`

Step 2: Navigate into the project folder: `cd smartbridge-smartlender`

Step 3: Install dependencies: `pip install -r requirements.txt`

Step 4: Ensure `loan_prediction_model.pkl` is present in the project root (already included in the repository).

Step 5: Start the application: `python app.py`

Step 6: Open a browser at `http://localhost:5000` to access the loan prediction form.

Alternatively, the live deployed application can be accessed directly at <https://smartlender-smartbridge.onrender.com/> without any local setup.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Cold start delay on first request after inactivity	Render's free hosting tier spins the server down when idle; the first request after a period of inactivity may take 30-50 seconds to respond. Subsequent requests are fast.
2	No user authentication / login	The prediction form is intentionally public for demo/evaluation access; no user accounts or access control are implemented.
3	No persistent prediction history	Predictions are stateless — results are not stored in a database. This is by design, since the project scope is a single real-time prediction tool rather than a record-keeping system.
